

**AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims**

1. (Original) A method of operating a mobile device, the method comprising:

maintaining a profile of voice user interface capabilities associated with the device;

storing an application having voice user interface features on the device or on a server in communication with the device;

examining at least part of the profile; and

using voice user interface features of the application which are appropriate to the profile and refraining from using inappropriate features.

2. (Previously presented) A method as claimed in claim 1, further comprising prior to the using step: initializing the application using information included in the profile.

3. (Previously presented) A method as claimed in claim 1, in which the maintaining step includes maintaining information relating to any combination of

vocabulary, dialogue, automatic speech recognition and text-to-speech synthesis capabilities.

4. (Previously presented) A method as claimed in claim 1, in which the maintaining step includes maintaining information relating to grammar capabilities, wherein the grammar capabilities comprise at least one of statistical and context free grammar capabilities associated with the device.

5. (Previously presented) A method as claimed in claim 1, in which the using step includes referring to definitions forming part of the application, and using those definitions with at least part of the profile to determine which parts of the application are appropriate to the profile.

6. (Original) A mobile device, comprising:  
a storage device for maintaining a profile of voice user interface capabilities associated with the device;  
a reader for examining at least part of the profile; and  
an application runner arranged to run an application using voice user interface features of the application which are appropriate to the profile and to refrain from using inappropriate features.

7. (Previously presented) A mobile device as claimed in claim 6, comprising an initializer, arranged to use information included in the profile to initialize the application.

8. (Currently amended) A mobile device as claimed in claim 6, in which the profile includes information relating to any combination ~~or~~ of vocabulary, dialogue, automatic speech recognition and text-to-speech synthesis capabilities.

9. (Previously presented) A mobile device as claimed in claim 6, in which the profile includes information relating to grammar capabilities, wherein the grammar capabilities comprises at least one of statistical and context-free grammar capabilities associated with the device.

10. (Previously presented) A mobile device as claimed in claim 6, in which the application runner is arranged to refer to definitions forming part of the application, and to compare these definitions with at least part of the profile to determine which parts of the application are appropriate to the profile.

11. (Original) A system comprising:  
  
a mobile device having voice user interface capabilities; and  
  
a server, capable of communicating with the mobile device,

the server being arranged to examine at least part of a profile voice user interface capabilities associated with the mobile device, and to run an application using voice user interface features of the application which are appropriate to the profile and to refrain from using inappropriate features.

12. (Previously presented) A system as claimed in claim 11, in which the server comprises an initializer, arranged to use information included in the profile to initialize the application.

13. (Previously presented) A system as claimed in claim 11, in which the profile includes information relating to any combination of vocabulary, dialogue, automatic speech recognition and text-to-speech synthesis capabilities.

14. (Currently amended) A system as claimed in claim 11, in which the profile includes information relating to grammar capabilities, wherein the grammar capabilities comprise at least one of statistical and context free grammar capabilities that are associated with the device.

15. (Currently amended) A system as claim[[ed]] in claim 11, in which the server is arranged to refer to definitions forming part of the application, and to use these definitions with at least part of the profile to determine which parts of the application are appropriate to the profile.

16. (Original) A method of testing the compatibility of an application with a mobile device, the method comprising:

maintaining a profile of voice user interface capabilities associated with the device;

controlling an emulator to emulate the voice user interface features of the device using at least part of the profile; and

running the application on the emulator.

17. (Original) Apparatus for testing the compatibility of an application with a mobile device, the application comprising:

a reader for reading at least part of a profile of voice user interface capabilities associated with the device; and

an emulator for emulating the voice user interface features of the device using the at least part of the profile, and for running the application.

18. (Original) Apparatus as claimed in claim 17, in which the profile is stored on the apparatus.
